

Functionality that no other ID card software can match!

Our **EXPERT** software is the perfect fit for Photo ID cards requiring multiple attributes.

Card Design

- Software will permit you to print different cards based on various user defined conditions.
- Multiple conditional branches are available for ID card personalization.
- Add ghosted images, watermarks, signature, or fingerprints to your photo ID cards.

Database Capabilities

- Interface to your existing database or create your own database with customized data entry screen form.
- Customize your data entry screens, add drop-down boxes, buttons or check boxes for data field types and ease of data entry.

E-card & Magnetic stripe encoding

- Encode ISO, single field 3-track multiple field 3-track, non standard ISO, HID and smart chip technology with this software.
NOTE: Encoding capabilities are printer dependent.
- Display smart chip, magnetic stripe and barcodes locations on your card template.

Security Features

- Protect your photo ID cards with SECURSHIELD™ graphical images.
- Create multiple passwords, assign password expiration dates and restrict user access.
- Set selected data fields to "Read Only" or "Read Only" after printing.

From a SIMPLE personalized badge to leading edge SECURE ID cards we have scalable ID card software solutions for all your identification needs! Our software is compatible with all major ink-jet, laser-jet, and ID card printer manufactures.

Why should I use **EXPERT** Photo identification software?

It is easy to install, fast to learn and it works.

It provides for flexible ID card design and data entry.

It has a powerful array of options with the ability to interface into multiple cameras, printers, databases of all types and styles.

It can be used on any standard ID card size and will even work with multiple cards on large sheets including Plastic, PVC, Teslin or card stock.

Photo ID's

The **EXPERT** photo identification software version 4.0 is the newest release within the Lexington Technology professional series software family of products. This feature rich product provides unsurpassed performance and is uniquely positioned to handle your photo identification requirements. If you need to link to external data sources, access data over a network, capture multiple photos, signature and fingerprint images; or wish to create multiple card designs and database connections, **EXPERT** version 4.0 is a perfect fit.

E-Card encoding capabilities

In today's environment the photo ID card is required to provide additional functionality beyond the traditional ID card. With our **EXPERT** software you have the ability to encode HID cards, smart chips, ISO standard and nonstandard cards, single and multitrack magnetic stripe cards and of course barcodes. This functionality within our software is printer dependent, however, you have these capabilities built in.

Multiple card templates

EXPERT software will allow you to design and store multiple templates within its database. These templates can be automatically selected based on data values; you can change card size, color, background graphics or text, *i.e.* change colors for students, faculties, contractors, visitors, employees, temporary employees, building access rights, security clearance levels or any other criteria you choose. You can store unlimited quantities of templates.

Database management

With our **EXPERT** software database management is simple to use and easy to configure. This software features extensive import and export capabilities with selective database options, unlimited record access with customizable search and retrieval criterias.

Database Auditing and reporting is extensive with our Session Security Access Reporting, which monitors each area of the program; filtered by data range, user ID or individual session.

Networking

Want to deploys your ID production to multiple computers on your company network. With our **Expert LE & EP**, just simply move the software folder to your shared network directory.

Student ID's • Employee ID's • Health Cards • Season Passes • Licenses • Time and Attendance • Loyalty cards • Access Control • Specialty Cards

Add multiple photos

- Black & White
- Color
- Ghosting
- Exposure preview
- Capture or import
- Image rotation

Select a frame for your photo

- 256 color selection
- Square corners
- Round corners
- Change frame widths

Add serial numbers

- Automatic selection
- Assign unique serial number
- Assign sequential serial numbers

E-Card encoding

- Barcodes
- Magnetic Stripe
- Smart Cards
- Display locations
- RFID
- HID prox cards

Insert Logos

- Import Images
- Set conditional images
- Image resizing
- Reversible images

Set dates

- Issuance
- Expiration

Add Text

- Static and Variable
- Rich text with mixed fonts
- Full font selection
- Select colors
- Word Art text

Add color to your ID Card

- Custom colors
- Background
- Text
- Frames
- Barcode
- Set colors based on conditions

Background Images

- Add custom images
- Import image files
- Change background images based on user selected conditions

Image capture

- Fingerprint images
- Signature images
- Supports signature and fingerprint

Conditional changes

- Card template selection
- Card graphics
- Change Visibility
- Set colors
- Frame color change
- User defined conditions which change card appearance
- Unlimited selection

Security features

- Multilevel logon passwords
- Assign password expiration
- Create security groups
- Restrict user access
- Set to read only after print
- SECURSHIELD™ GRAPHIC IMAGING

SECURSHIELD

Reports

- Card production report
- Customizable reports
- Security access report

Printing features

- Standard and custom sizes
- Live print preview
- Batch printing w/multi card formats
- Multiple cards on a single page
- Single and duplex modes

Cameras

- Olympus interface for select cameras
- TWAIN compliant capture devices
- VFW compliant capture devices
- Auto image resize
- Red eye reduction
- Exposure preview
- Image sizing w/fixed aspect ratios
- Background removal
- Auto image resizing

Data entry import & export

- Incremental number fields
- Custom auto-increment
- Sequential records
- Batch updates
- Batch deletion
- Batch import
- Automatic record retrieval via card
- Advance search criteria
- Display record modification data
- Custom record sorting

Add Geometric Shapes

- Circles
- Squares
- Eclipses
- Lines

Compatible Printers

- Thermal printers **FARGO** **Eltron**
- Ink-jet **MAGICARD**
- Laser-jet **TEAM NISCA** **hp**
- Speciality printers
